

RETROFIT

 Anywhere there is
an existing DMS that
needs upgrading

Upgrade your DMS to the latest LED technology with our unique retrofitting package.

Full Package We sell the full retrofit package as a lump sum per DMS upgraded, so there are no surprises with the cost or the services provided.

DMS Technology Our kit uses the same technology as a new DMS, but fits it within your existing housing for cost-efficiency and ease of installation and transition.

Unique Method Our method includes sign survey(s), aluminum supports for new components, full factory wiring, standard factory acceptance tests, a 48-hour burn-in test, installation assistance, site testing and commissioning, and the same warranty as a new DMS.

Easy and Fast Our methodical approach means a typical DMS can be retrofitted in just 2-3 days, and we'll keep you in the loop the whole time.

Any Type of DMS We can retrofit any DMS technology: from fiberoptic, to hybrid, to flip disk, to LED, we have successfully upgraded 7 different brands and more than 20 DMS types throughout the US.

Why SESA?

Personal Care SESA views its projects not as sales, but as promises. Ask about our two-year warranty, our lifetime support guarantee, and our extensive parts support inventory!

Innovative Technology At SESA, we pride ourselves in innovating new products and solutions to further serve our clients' needs. Our unique retrofit kits contain everything needed to cost-effectively upgrade an older sign's technology within the same housing!

Long-Term Support SESA views its projects not as sales, but as promises. Ask about our two-year warranty, our lifetime support guarantee, and our extensive parts support inventory!

- ▲ The retrofit kit includes: display boards, power supplies, light sensors with associated wiring, sheet metal supports, and component mounting brackets.
- ▲ The control cabinet kit includes a new SESA controller, power supply, surge arrestor, and main switches, and is fully wired and ready for installation in any cabinet.
- ▲ The entire retrofit kit is NTCIP and NEMA TS4 compliant.
- ▲ Sign life-expectancy following a retrofit is an additional 10-15 years.
- ▲ High-intensity LEDs ensure high visibility even behind an older front-face.
- ▲ Retrofit components do not require ventilation and can be installed even if the old DMS's ventilation does not work.

More than 350 DMS retrofitted across the USA, including in:

- Virginia
- Texas
- Oregon
- New York
- Washington
- Washington DC
- Pennsylvania
- Alaska
- Florida
- Ohio

New SCU6 Controller with advanced features for your convenience:

- Unique full color WYSIWYG touch screen for diagnostics and sign maintenance
- Unique web-based maintenance software
- Standard 19-inch rack (3U) mounting
- Embedded digital I/O
- Front face indicators
- NTCIP v2 compliant
- Can control multiple nearby signs from a single location, regardless of sign type or size
